18. ~~(Three Times Amended) A control method for a communication apparatus capable of~~
facsimile communication through the Internet by dial-up connection, comprising:

establishing a dial-up connection from a station A to an Internet service provider to execute communication with a station B having a TCP/IP address through the Internet; and

calling the station B from the station A, when the dial-up connection is established, notifying the station B via the PSTN that a facsimile has been sent through the Internet and description information of the facsimile sent through the Internet, prior to the station B accessing the Internet.

19. (Three Times Amended) A computer-readable storage medium which stores a program for controlling a communication apparatus capable of facsimile communication through the Internet by dial-up connection, comprising:

EPH
E3
a procedure code for establishing a dial-up connection from a station A to an Internet service provider to execute communication with a station B having a TCP/IP address through the Internet; and

a procedure code for calling the station B from the station A, when the dial-up connection is established, notifying the station B via the PSTN that a facsimile has been sent through the Internet and description information of the facsimile sent through the Internet, prior to the station B accessing the Internet.

EPH
E4
20. (Four Times Amended) A communication apparatus comprising:
transmission means for transmitting facsimile data via the Internet; and
notification means for notifying a recipient, by a method different from that of the transmission means, that the transmission means has already sent the facsimile data to the recipient via the Internet, prior to the recipient accessing the Internet.

EPH
E5
22. (Four Times Amended) A communication apparatus comprising:
first means for sending facsimile data over a first communication network to a recipient;
second means for sending data over a second communication network to the recipient;
third means for controlling the first means and the second means;
wherein the third means controls the second means so as to send data corresponding to the sending operation of the first means, and
